insync

community healthcare management

community healthcare management software for health professionals

insync

the benefits

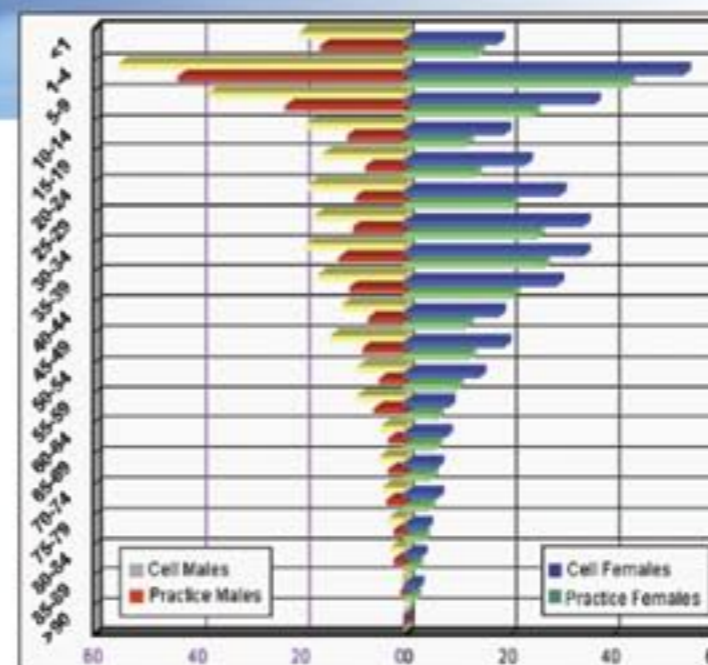

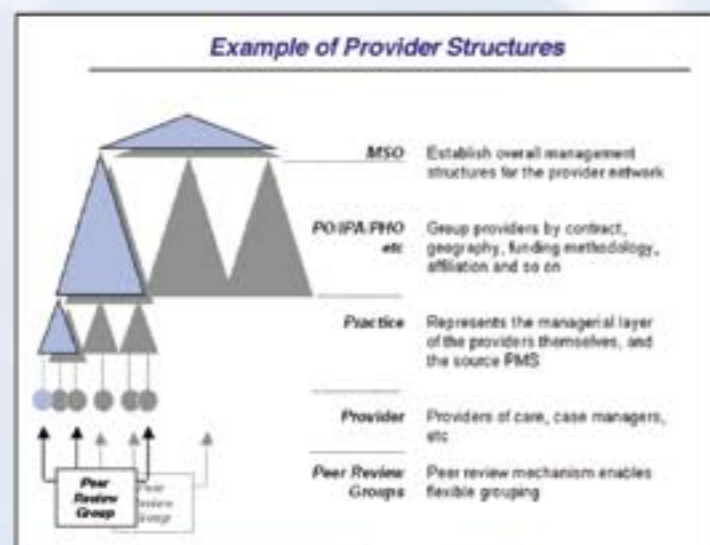

Insync provides innovative tools for better management of healthcare provider communities and delivers a complete solution for Health System Management.

Insync provides real benefits to your healthcare network:

- Provides essential information on the population you are caring for and their health status
- Offers rapid and inexpensive implementation of a range of health and wellness programs
- Allows for improved clinical quality assurance and governance
- Gives you the tools to deliver better management of your available resources
- Provides information on healthcare provider capabilities and quality, and provides tools to help identify and improve performance
- Enables integration of hospitals with primary care for improved discharge planning and coordinated care programmes
- Coordinates a provider network of front office systems, particularly those using Profile
- Handles central patient registration, capitation calculations and disease based fee for service programs. Can provide a clearing house mechanism
- Population Electronic Medical Records are "fed" from the front office provider systems, enabling population health management, individual care plans and screening.

The provider structure within Insync is flexible.

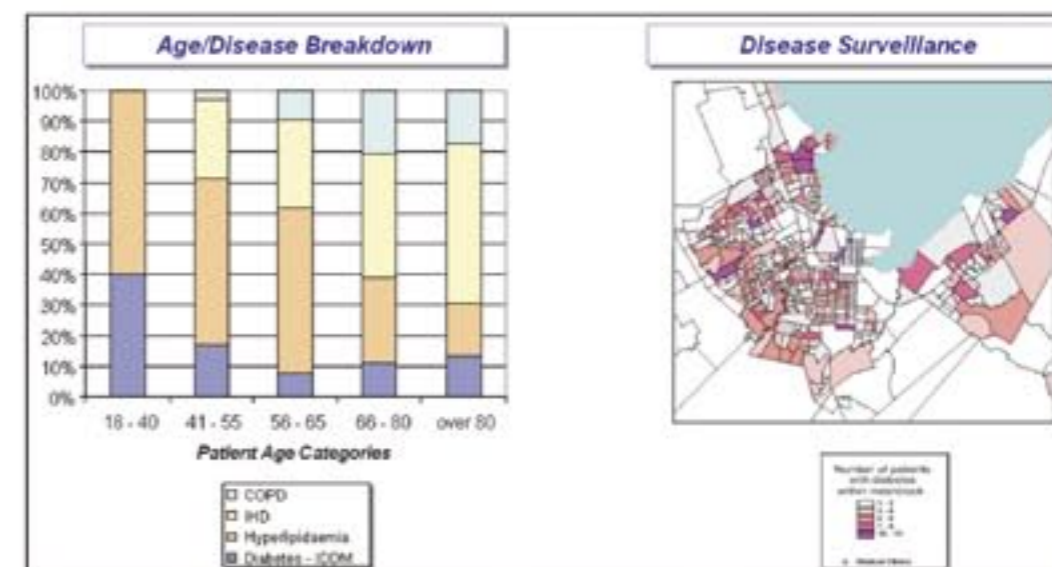

Insync can perform practice and provider profiling.

Insync delivers the ability to really understand and better manage the community under your care

- Undertake Population Analysis using the Master Patient Index
- Enhance your benchmarking and management capabilities with Provider Registration
- Improve the management of financial relationships between providers and payors with Claims Processing
- Define eligibility for a provider to make claims and deliver services with Contract Management
- Improve management of your pharmacy spend with the Resource Utilisation functionality
- Insync Disease Streams Analysis lets you combine patient demographics and clinical information to undertake disease analysis.

Intrahealth is not just a software company, it's a health innovator.

Insync combines demographic and clinical information to undertake disease analysis.

Intrahealth powering clinical innovation

Who uses Intrahealth software?
